Xenon press release announces the new 07-08 Jeep Wrangler JK Narrow Flat Panel Design Flare Kit. These flares are the same design as the original JK Flat Panel flares but are 1.5" Narrower Than Stock Width Factory JK Flares. While the Flat Panel Design allows for additional clearance for larger diameter tires, the narrower width give the Jeep JK that aggressive "Crawler Look" that is desired by today's Jeep enthusiasts. Made of virtually unbreakable urethane, these flares are rugged with a great fit and finish. All instructions are included along with installation hardware and amber running lights. These flares also carry Xenon's Limited Lifetime Warranty.
